

KB220239543: ArtiosCAD - Database migration

Description

How to move an ArtiosCAD database from an old server to a new server if none of the design or manufacturing files are moved.

Procedure

The "**Esko ArtiosCAD database migration export**" and "**Esko ArtiosCAD database migration import**" tools are needed. They are located in the ArtiosCAD program group under Migration tools folder (Windows **Start** button > **All Programs** > **Esko** > **ArtiosCAD** > **Migration tools**).

1. On the new server, browse to "**Data sources ODBC 32 bit**" and point to the old server and its database (i.e. ACADSVR\Artioscadexp2005), save it. Use the "**Esko ArtiosCAD database migration export**" tool to export the database tables into a local directory.
2. On the new server, browse to "**Data sources ODBC 32 bit**" and point to the new server and its database (i.e. NEW-ACADSVR\ESKO), save it. Use the "**Esko ArtiosCAD database migration import**" tool to import the database tables from the local directory.
