

KB78611681: Hotfix 1204028 for ArtiosCAD 12.1.1

RECOMMENDED

Summary

Drafting tools fail to refresh. Some tools like, line offset, stretch by polygon and delete a conline do not refresh after the tool completes. It appears that the geometry was not added or deleted.

Symptoms

Drafting tools fail to refresh.

Some tools like the line offset, stretch by polygon and delete a conline do not refresh after the tool completes, so it appears that the geometry was not added or deleted. The workaround is to invoke a refresh operation (**F2**, mouse wheel) but this is not immediately apparent and will be confusing.

This hotfix also contains a fix for the red box issue when using edges in 3D which can sometimes happen.

For Enterprise, there were two additional issues addressed as well:

1. The restricted set list would appear very small, as to effectively not show any elements in the set.
2. To increase a timeout for handling a request when downloading 3D files which can be very large.

What is a Hotfix?

A Hotfix is a software package that you can install on an existing installation of our software. Each hotfix contains fixes for one or more known issues in our released software.

Because there is always a small chance for a hotfix to cause new issues, you should only install Recommended Hotfixes, unless otherwise instructed by your Esko Software Support team.
