

KB73058589: Automation Engine - How to make the Automation Engine Pilot remember the user name and server name after the installation of "HOTFIX 1202008 for Automation Engine 12.0.1"

Summary

The Automation Engine Pilot does not remember the user name and server name in the login window after the installation of **HOTFIX 1202008 for Automation Engine 12.0.1**.

Cause

The Automation Engine Pilot does not remember the user name and server name because the `bg.properties` file is not copied to the folder `/Applications/Automation Engine Client 12.0.1` as it is a read-only folder.

Solution

The `bg.properties` file must be in the `/Applications/Automation Engine Client 12.0.1` folder. This folder needs to have read and write permissions for all users.
