

KB170987545: Nexus - Windows 2008 server keeps running out of disk space

Summary

On Windows 2008 Server, the server keeps running out of disk space on the boot drive and this causes Nexus to fail.

Symptoms

Server keeps running out of disk space on the boot drive and this causes Nexus to fail.

Cleaning up of temp folder works a little longer, but runs out of space again later until getting to a point that there is no temp file anymore and the drive is completely full.

Solution

This is from the OS doing some sort of back up on the Server OS and this file had grown to be pretty large.

To correct this, please see a KB from Microsoft: <http://support.microsoft.com/en-us/kb/2852386>
