

KB191634037: Hotfix 201704044 for WebCenter 16.1

Summary

Regression when using brackets in cascading list attributes in search.

Release date

Friday, August 11, 2017

Symptoms

When searching for a value in attribute cascading list drop-downs, in the search results top parameter panel and the value contains special search characters. For example: () ~ | &, then no results are found or an error about invalid search characters is shown.

What is a Hotfix?

A Hotfix is a software package that you can install on an existing installation of our software. Each hotfix contains fixes for one or more known issues in our released software.

Because there is always a small chance for a hotfix to cause new issues, you should only install Recommended Hotfixes, unless otherwise instructed by your Esko Software Support team.
