- [DeskPack Plugins for Adobe® Illustrator® 14 System Requirements](#)
- [DeskPack Plugins for Adobe® Illustrator® 12.1 System Requirements](#)
- [DeskPack Plugins for Adobe® Illustrator® 10 System Requirements](#)

Notes

1. Installing and using Esco software on a Terminal Services or Remote Desktop Services server (Microsoft, Citrix,...) is not supported, except for non-subscription versions of Cape Pack. You cannot run Esco software with local licenses via Remote Desktop.
2. Although we don't expect issues with Microsoft OS patches, Esco only guarantees support on the official MS Service Pack (SP) level, not on individual OS patches. PC's for Esco applications (editors, rips or servers) must not be configured as WebServers (IIS), Network Domain Controllers (Active Directory), DNS Server, DHCP Server, WINS Server, SQL Server, or MailServer. The Automation Engine Server is allowed to be a Member Server in a Windows Active Directory domain. However, Esco can not test all possible configurations. Contact your regional Customer Service Center in case of specific questions.
3. A single processor with hyperthreading enabled is considered as 2 processors for memory calculations. A dual core processor is considered as 2 processors for memory calculations.
4. Esco software will only work with properly licensed versions of operating systems and other software. Esco is not responsible for any loss of functionality due to use with unlicensed software. Esco will not provide assistance in installing software on equipment lacking properly licensed software.
